

Library Task

1. make a function constructor to create a book object every book should have (name, price, author) properties. And the author is a function constructor too that has (name and email property).
- Then make your own interface and ask the user for number of books would be entered as fig a

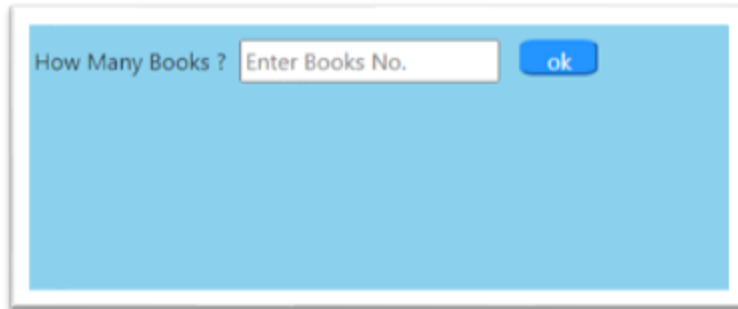

The image shows a web form with a light blue background. At the top left, the text 'How Many Books ?' is displayed. To its right is a text input field with the placeholder text 'Enter Books No.'. Further to the right is a blue button with the text 'ok' in white.

Fig. a

- Create an array of books objects and fill its data from the user throw a validated form.
- After the user enters the needed data for all number of books fill a table with this data each row contains a book info with edit and delete buttons
 - Edit button: when it clicked all table fields be editable so the user could update the book info and could save the changes or cancel it
 - Delete button: will delete the book and whole row.

Note: any changes made on the books should updates the array of the book's objects.

Book's Name

Please provide a valid name.
